SURFACE ROUGHNESS MEASUREMENT SYSTEM

High Speed Full Surface Wafer Scans for Front and Backside Measurements

Revolutionizing Wafer Manufacturing

The fastest, most accurate, laser technology non-contact texture measurement system in the world. The system collects scattered light and segments the scattered light to compare anisotropic and isotropic roughness of the wafer surface. Make a full surface scan in the time it takes you to boot up your PC. Don't settle for just a piece of the wafer puzzle; get a full wafer scan with a TMS-3000WRC.
